Date: 7/31/2006

GAIN Report Number: UP6013

Ukraine

Food and Agricultural Import Regulations and Standards

Country Report

2006

Approved by:

Garth Thorburn, Agricultural Attaché Office of Agricultural Affairs

Prepared by:

Oleksandr Tarassevych, Agricultural Specialist

Report Highlights:

There have been no major changes affecting agricultural product quality, safety, and sanitation regulations in Ukraine since submission of the last report. Only select legislative changes were made, a requirement for WTO accession. Veterinary certificates for red meat and products were negotiated between the United States and Ukraine in March 2006, although bilateral trade in these products has not begun. Product specific requirements for pet food, meats, feed additives, seeds and livestock genetics are provided in this report.

Includes PSD Changes: No Includes Trade Matrix: No Annual Report Kiev [UP1] [UP]

(AS OF JANUARY 1, 2002)	34
APPENDIX XIII. IMPORTED GOODS THAT ARE SUBJECT TO VETERINARIAN	
CONTROL (ACCORDING TO THE ORDER #71 OF THE STATE DEPARTMENT OF	
VETERINARY MEDICINE OF UKRAINE)	35

This report was prepared by the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Kiev, Ukraine for U.S. exporters of domestic food and agricultural products. While every possible care was taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that U.S. exporters verify the full set of import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY'S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

SECTION I. FOOD LAWS

Ukraine possesses a complicated and costly system of food safety inherited from the Soviet Union. Controls are implemented by various state agencies that often have overlapping functions. The following agencies of the Government of Ukraine (GOU) are involved in assuring the safety of domestically produced and imported food products, and animal and plant health issues:

- State Epidemiological Service (SES) of the Ministry of Health Care of Ukraine (MHCU) establishes food safety standards and is responsible for ALL aspects of food safety;
- State Department of Veterinary Medicine (SDVM) of the Ministry of Agricultural Policy of Ukraine (MAPU) is responsible for animal health, safety and wholesomeness of meat, seafood and other products of animal origin;
- Main State Phytosanitary Inspection Service (MSPIS) of the MAPU is responsible for plant health issues;
- State Committee of Ukraine on Technical Regulations and Consumer Policy (SCUTRCP) is responsible for compliance of food products with existing quality and safety standards;
- State Ecological Inspection Service (SEIS) of the Ministry of Environment and Natural Resources of Ukraine (MENRU) is responsible for radiological and environmental control.

Ukraine is not yet a member of the World Trade Organization (WTO) and does not notify its trading partners of proposed regulatory changes. Therefore, it is difficult for foreign suppliers to be aware of the most current food safety regulations. Suppliers should work with experienced importers in order to verify most current import requirements prior to shipping to Ukraine. It is expected that Ukraine will comply with the WTO Agreement on the Application of Sanitary and Phytosanitary Measures (the SPS Agreement) at the time of accession. Currently, certain sanitary measures used in Ukraine could be considered as non-compliant with provisions of the WTO agreement and/or with the standards established by international standards setting bodies, as well as with internationally accepted trade practices.

Customs clearance and co-related inspections in Ukraine are fee-based and are viewed by many regulatory agencies as a source of additional revenues. Exporters should be prepared for two or more GOU agencies to take samples from their shipment and test for the same safety indicators.

Although the country's regulatory environment is constantly evolving, most food safety standards have not been revised since the breakup of the Soviet Union in 1991. The main document which regulates food safety indicators in Ukraine is the Medical and Biological Requirements and Sanitary Norms of Quality of Raw Food Materials and Food Products that

was approved by the Ministry of Health Care of the USSR on August 1, 1989. This document divides all food products into nine major categories: meat, meat products, poultry and eggs; milk and dairy products; fish, fish products and other seafood; bread, pasta and cereals; sugar and confectionary, vegetables, melons and gourds, fruits, berries and processed products of thereof; fat products; drinks and fermented products and other products. The document establishes a set of nutritional (content of protein, energy, carbohydrates, vitamins, micro elements, etc) and safety (maximum residue levels (MRLs) for heavy metals, mycro-toxins, antibiotics, hormones, pesticides and microbiological limits) standards for each product category. Ukrainian health authorities have declared their intention to revisit the norms; however, no published information is available at this point.

Imported food products must meet the same requirements as domestically produced foods. While enforcement of food safety norms has been generally effective, outdated nutritional norms have not been rigorously enforced. The list of applicable Ukrainian legislation on food safety available in English is in Appendix IV.

SECTION II. LABELING REQUIREMENTS

All food products sold in Ukraine must be labeled in accordance with the Law of Ukraine On Quality and Safety of Food Products and Food Raw Materials (see Appendix XII for a link to an English version of the Law). The label must contain the following information:

- 1) Name of food product;
- 2) Nominal quantity of food product (weight or volume in metric system measures);
- 3) List of all ingredients in the food product, including other food products and food additives used:
- 4) Nutritive values and energy, if applicable;
- 5) Expiry date, or the date of production with indicated shelf life;
- 6) Storage conditions;
- 7) Indication of a normative document according to which the product was produced (applicable for domestic food products);
- 8) Producer's name, address and place of production;
- 9) Terms of use (if anv):
- 10) Presence of genetically modified organisms (GMO);
- 11) Warning for consumption of food products by certain consumer categories (children, pregnant, senior people, athletes etc.)

The label must be in the Ukrainian language and meet the above mentioned requirements; therefore, the product cannot enter Ukraine with only a standard U.S. label.

Stick-on tags that meet Ukrainian food safety law requirements are allowed and can be placed on the side or over the standard U.S. label. A sample of the stick-on tag is provided in Appendix V. There are no restrictions as to the number of languages and some products sold in Ukraine have been labeled with as many as ten European languages (Appendix VI).

Customs authorities require compliance with Ukrainian labeling requirements prior to granting final clearance to the product. Some importers prefer to deal with products that already contain labels that meet the Ukrainian requirements while others prefer to attach labels in a licensed customs warehouse in Ukraine.

The product's expiration date (or its shelf life indicated with the date of production) must appear on the label. Although Ukrainian food safety legislation allows the producers to determine the shelf life of the product, it is highly advisable to verify with the importer

whether it meets the existing Ukrainian technical regulations (GOST or DSTU). There have been some discrepancies between producer-determined shelf life and old Soviet-era technical standards that have allowed the Ukrainian veterinary authorities to block certain seafood products.

The legislation and implementing regulations do not set the rules for label size and format; however, they stipulate that labels must be "easily understood". It is prohibited to include health claims, make statements targeting particular consumer groups (children, pregnant women, athletes) without prior approval from the MHCU.

Biotechnology content labeling requirements have been in place since November 2002. However, no labeling threshold has been established by the GOU. State GMO testing techniques as well as labeling enforcement have been weak and FAS-Kiev has not seen a single label referring to GMO content in Ukraine.

SECTION III. PACKAGING AND CONTAINER REQUIREMENTS

As a part of the mandatory state sanitary and hygiene testing, the packaging of imported food products is also checked for transfer of polymers (and other) to food products. Regulations on Ukrainian packaging requirements can be obtained from the Institute of Ecohygiene and Toxicology of the MHCU (see Appendix I).

Exporters must consider utilization of used packaging material while planning their shipment to Ukraine. Ukrainian legislation on Waste Products requires the provision on utilization or re-exportation of used packaging materials in the export contract (Article #17, Law # 3073-III dated March 3, 2002).

There are no particular container requirements in Ukraine. Due to small shipment volumes from overseas, exporters should be prepared to ship mixed product loads in one container. It is required to have a separate health or veterinary certificate for each homogenous product lot in the container. Odessa and Illichivsk Trade Sea Ports are by far the leading ports for handling containerized cargoes in Ukraine and can accept general-purpose containers. Both ports can handle refrigerated containers. It is highly advisable to verify with the freight forwarder whether or not other ports can process a particular cargo, pallet or container size.

In cases where U.S. legislation allows for reuse of packaging, all old labels must be completely removed from the boxes found within a container. FAS-Kiev is aware of at least one case when double labeling caused problems for a U.S. exporter. For many products subject to veterinary control there are separate packaging or disinfections requirements. In such cases they are clearly indicated in the bilateral health certificate (see Veterinary Inspection Chapter in the Section VI).

SECTION IV. FOOD ADDITIVE REGULATIONS

Ukraine maintains a positive list of food additives. Recommendations of the CODEX Alimentarius Commission, an international food safety standard setting body, are considered in approving new food additives; however, the MHCU conducts its own risk assessment for each new substance. The list of approved food additives in Ukraine is provided in Appendix VII). It is prohibited to import food products that contain food additives that have not received approval from MHCU.

There are four food additives, which are not on the list of approved additives, but which have been cleared for use in imported products. The Ukrainian sanitary authorities have

conducted a food safety risk assessment and have established maximum allowed levels (MAL) in order to monitor imported food products (Appendix VIII). Importers of food products that contain non-registered food additives may seek their registration with the MHCU. There is no information available on the MAL for approved food additives since the GOU discontinued publishing them in January 1999.

SECTION V. PESTICIDE AND OTHER CONTAMINANTS

Ukraine establishes its own Maximum Residue Limits (MRLs) for chemical and biological contaminants in food products. An illustrative list of MRLs controlled by the GOU in meat products is provided in Appendix IX. The Ukrainian sanitary service recognizes the norms established by the Codex Alimentarius Commission for non-registered pesticides in the case of imported foods.

The use of officially registered pesticides and their application procedures are controlled by the Ministry of Ecology and Natural Resources (MENR) using the norms established by the MHCU. The MENR publishes the Catalogue of Pesticides and Agricultural Chemicals Allowed for Use in Ukraine every year. The Catalogue lists all registered pesticides by brand name, active ingredients, MRLs in different agricultural products, water, soil and air. Agricultural chemicals not listed in the catalogue cannot be used domestically, and no residues in agricultural products are allowed.

SECTION VI. OTHER REGULATIONS AND REQUIREMENTS

Agricultural and food products imported into the customs territory of Ukraine shall be subject to sanitary testing, compulsory certification, radiological, veterinary and/or phytosanitary inspections. Due to the complexity of Ukrainian food safety regulations, FAS Kiev has prepared a single table to illustrate the types of controls exercised on imported products by the Harmonized System (HS) of Codes (Appendix X). Sanitary and veterinary inspections have been combined into one category for convenience, although, a separate veterinary inspection is conducted for the products that fall under the following headings of the HS: 01-05; 07; 10; 12; 14-16; 19; 21 and 23.

State Sanitary Inspection of Food Products

State sanitary inspection of food products is the major element in the Ukrainian food safety system. It is especially true for processed products that are not subject to veterinary and/or phytosanitary control. The State Sanitary and Epidemiological Service of the MHCU test imported food products for compliance with *the Medical and Biological Requirements and Sanitary Norms of Quality of Raw Food materials and Food Products* referenced in Section I of this report. The MHCU issues to the importer the certificate of state sanitary and hygiene testing upon the completion of required tests. The importer or producer must pay for such testing for each food product.

Certification

Imported food products listed in Appendix X are subject to mandatory conformity certification in Ukraine. The cost of certification is born by an applicant (either exporter or importer). There are usually two options available to exporters and importers depending on the value and the frequency of shipments as compared with the cost of certification. The first option requires compliance by a foreign facility to the existing Ukrainian norms and regulations on quality and safety. The supplier receives a certificate of conformity valid for two-three years and that avoids certification of each shipment. The second option involves certification of each product shipment with mandatory laboratory tests upon arrival in

Ukraine. The State Committee of Ukraine on Technical Regulations and Consumer Policy (SCUTRCP) is in charge for conformity certification procedures and controls availability of the valid certificate for eligible food products sold in the customs territory of Ukraine. The same state entity maintains the Single State Register of Certified Products.

Certification is conducted for compliance with state quality standards (GOST – old soviet standards or DSTU – Ukrainian national standards) and safety norms (tolerance levels of toxic elements, pesticides, mycotoxins, bacterial contamination and radionuclides). There are more than 100 institutions that are authorized to conduct certification in the Ukrainian State Certification System UkrSEPRO. The samples are collected independently from the sanitary and veterinary inspections samples.

U.S. exporters can also refer to the Country Commercial Guide prepared by the Foreign Commercial Service of the U.S. Department of Commerce in Kiev to learn more about certification in Ukraine and recognition of the international ISO-9000 series standards in Ukraine (Chapter 6: Trade Regulations and Standards, Subchapter J). A link to the above mentioned report is located in Appendix II.

Phytosanitary Inspection

In cases when phytosanitary inspection of food and/or agricultural products is required, the exporters or freight forwarders are advised to obtain a copy of the Import Permit issued by the MSPQIS prior to applying for the Federal Phytosanitary Certificate, PPQ Form 577 issued by USDA's Animal and Plant Health Inspection Service:

(http://www.aphis.usda.gov/ppq/pim/exports/577.pdf). The Import Permit contains product-specific requirements, including disinfection and/or disinfestation treatment. If such treatment is required, the PPQ Form 577 should contain the necessary information on the chemical, concentration used, duration, temperature and date of treatment.

Ukrainian Phytosanitary inspectors will conduct an initial inspection of the cargo at the port of entry and will take product samples for a laboratory test to verify that live quarantine pests are not present in the cargo. The product will have to be either fumigated again or refused entry if quarantined pests are found alive at the port of entry. The local branch of the MSPQIS conducts the secondary phytosanitary inspection at an in-land point of product destination to verify compliance with import conditions. The product will receive the final phytosanitary clearance following the secondary inspection.

Veterinary Inspection

Requirement for products that are subject to state veterinary surveillance and control are established up by Order #71, adopted by the State Department of Veterinary Medicine (SDVM) on June 14, 2004. The order contains a complete list of such products and lists the requirements for each product. (The list is provided in Appendix XIII). Prospective U.S. exporters should refer to the list even if the commodity in question is not subject to veterinary control in the U.S. Ukrainian state veterinarians at the border may conduct inspection of canned products that contain very small amounts of meat or animal fat, animal feeds of plant origin (such as soybean meal), ready-to-eat seafood products and frozen fish. It is advised to contact an importer to find out about most recent changes in the list. At this point there is no clear line that would separate SDVM authority from the State Sanitary and Epidemiological Service authority in animal products, so in some cases both inspections could be demanded. FAS Kiev is unaware of cases when import veterinary inspections of products other than those in Appendix XIII were performed.

Every shipment arriving in Ukraine will be inspected and sampled regardless of the statements made in the accompanying health certificate. The exporter or importer will have to bear the costs associated with border lab testing or the cost of appeal which is arbitrated at the Central Laboratory of the Veterinary Service. The cost of testing varies between US \$80 and \$500 depending on the number of tests required and number of uniform lots in the shipment. The testing procedure will take up to 7 days, which makes the import of some highly perishable goods impractical or impossible. In some cases Ukrainian veterinarians may examine a shipment for compliance with Ukrainian State Standards (GOSTs and DSTUs). The importer should be aware that product shelf life terms in the Ukrainian Standards are often shorter than those, adopted in the U.S. Imported products may remain wholesome according to the U.S. export certificate, but have expired shelf life according to Ukrainian terms. U.S. exporters are advised to contact their Ukrainian partners to avoid this problem.

Please note, that definition of "allotment" is not defined by Ukrainian legislation. In some cases the Ukrainian veterinary service defines allotments based on production dates (boxes produced 3 days apart maybe defined as belonging to different allotments). Many importers will request U.S. exporters to ship fewer allotments to avoid excessive sampling, testing and long delays. Exporters should notice that none of the existing bilateral certificates requires veterinary inspections of U.S. facilities.

The list of products, allowed for export to Ukraine and falling under the auspicious of the Food Safety Inspection Service can be found on the official FSIS web page: http://www.fsis.usda.gov/Regulations & Policies/Ukraine Requirements/index.asp
Protocols for exporting animals to Ukraine are available through the International Regulations Retrieval System (IRRS) of USDA's Animal and Plant Health Inspection Service at the following address: http://www.aphis.usda.gov/NCIE/iregs/animals/up.html
For frozen fish and seafood products an exporter is advised to contact the proper U.S. Competent Authorities. An export certificate can be issued either by U.S. Food and Drug Administration (FDA): http://www.cfsan.fda.gov/~ear/p-sea.html or (in case of fish and other aquatic animals) by the National Oceanic and Atmospheric Administration (NOAA) of the U.S. Department of Commerce: http://www.noaa.gov/. For frozen fish import regulations and standards, please refer to UP 6011 GAIN Report at: http://www.fas.usda.gov/gainfiles/200605/146197842.pdf, which explicitly describes import requirements in Attachment I.

In case of a discrepancy between statements required by the Ukrainian SDVM Order #71 and those made in the negotiated U.S.–Ukraine Health/Veterinary Certificate, the official certificate will prevail.

Radiological inspection of food products

In order to protect consumers from internal exposure after the Chernobyl accident in 1986, the GOU has rigidly controlled food contamination by radionuclides. In 1997, the MHCU approved the state hygienic norms (so called DR-97) which established the maximum allowable levels (MAL) for the two most occurring radionuclides – Cesium-137 (137Cs) and Strontium-90 (90Sr). See Appendix XI for the list of MAL in different food products.

Samples shipped via express mail

Samples worth less than \$100 can be cleared duty-free according to the Ukrainian legislation. The regulations do not distinguish product samples from food products; therefore, samples shipped via express mail could be subject to sanitary, veterinary,

phytosanitary, radiological and ecological inspection if the customs officer determines that such control is necessary.

SECTION VII. OTHER SPECIFIC STANDARDS

Pet Food and Feed Additives

According to Article 14 of the Law of Ukraine "On Veterinary Medicine" pet food and feed additives assessment of the possibility and advisability of pet food and feed additives' use in Ukraine shall be conducted by the State Scientific and Control Institute of Veterinary Drugs and Feed Additives (Appendix I).

The official document for pet food or feed additive registration in Ukraine is the Registration Certificate. Purchase and utilization of pet food and feed additives that are not registered in Ukraine are prohibited. The Registration Certificate and the Quality Certificate from the Manufacturer for a feed additive are mandatory documents to be presented at the point of entry into Ukraine.

U.S. Department of Agriculture's Animal and Plant Health Inspection Service (USDA/APHIS) has published the veterinary certificate for pet food exported to Ukraine at the following location: http://www.aphis.usda.gov/vs/ncie/iregs/products/pr_up_vcpf.pdf. As a reference, applicable regulations on pet food and feed additives registration can be found on APHIS' web site: http://www.aphis.usda.gov/vs/ncie/iregs/products/pr_up_registration.pdf.

A company, that files for registration will assume all costs associated with the procedure. Experts from the State Scientific and Control Institute of Veterinary Drugs and Feed Additives will establish a separate registration procedure for every pet food or feed additive sample. Field trials may be required for some products. The cost of registration will be between \$600 and \$3,200 depending on the number of tests and field trials. The cost will be lower if a group of similar products is registered. Staff from the Institute claimed that the procedure should not take longer than 90 days, but it depends on the accuracy of documents and samples sent. Additional information concerning registration of pet food and feed additives can be found on the Institute's web site at http://www.scivp.lviv.ua/

If the product receives the approval of the Institute, the exporter will receive a 5-year Registration Certificate. When the 5-year term expires, the company will be required to renew the Certificate. In this case the Institute will not ask for a product sample, but only for a set of documents, and the procedure will be somewhat faster and cheaper.

Seeds

Seed exporters should note that prior to importing seeds into Ukraine for commercial release, each plant variety must be registered with the General State Agricultural Inspection of Ukraine (GSAIU) that was created in May of 2006. The inspection took over all functions of the former State Service for Plant Varieties Rights Protection. The entire registration process may take up to three years and cost the applicant (variety owner, exporter or importer) \$5,000-\$10,000 depending on crop type and extensiveness of field trials. This amount includes expenses related to field trials and maintenance of the variety in the Register. Currently only a few U.S. corn and sunflower hybrids are included in the State Register.

Plant varieties that show consistently good performance usually receive a temporary registration after the second year and can be marketed to farmers. Seeds imported for field trials can enter Ukraine under a single-time permit from the GSAIU. The MAPU can also

issue single-time permits for commercial seed imports that do not require plant variety registration if it deems such imports as urgent and necessary.

At the time of a seed shipment, the exporter should plan for a 3-5 day seed certification period in Ukraine. The State Seed Inspection Service of the MAPU inspects imported seeds for compliance with the Ukrainian state quality and purity standards even if a valid Orange International Seed Lot Certificate accompanies the shipment.

For more information on import requirements and procedures, please read Ukraine's Planting Seeds Report at: http://www.fas.usda.gov/gainfiles/200502/146118831.pdf or visit the English language site of the former State Service for Plant Varieties Rights Protection at: http://sops.gov.ua/index.en.htm

Special Food Products

Dietary, prophylactic food products and biologically active agents, baby food and food for athletes are considered special food products in Ukraine. The importer must register special food products with the Ministry of Health Care of Ukraine prior to importing them into Ukraine. After a positive verification of health claims and a food safety risk assessment, the product will be included into the State Register of Special Food Products of Ukraine.

SECTION VIII. COPYRIGHT AND/OR TRADEMARK LAWS

Protection of intellectual property rights is weak in Ukraine. Piracy is a common problem for domestic and foreign food suppliers with well-known consumer brand names. Ukraine is a member of the World Intellectual Property Organization, although, U.S. exporters may consider registering their brand names in Ukraine. See Appendix I for contact information for the State Committee of Ukraine on Intellectual Property (SCUIP), which is the GOU's agency responsible for the protection of intellectual property. Suppliers should work closely with their local distributors to identify any case of piracy and report them to local law enforcement agencies or to intellectual property rights inspectors of the SCUIP.

SECTION IX. IMPORT PROCEDURES

Note: Information in this section is considered accurate at the time of its publication. Exporters should confirm the exact import procedures for individual products prior to shipment to their importers. There may be specific import requirements for certain products that were not mentioned in Section VII of this report (alcohol, tobacco, etc.) Ukrainian is the only official language recognized in Ukraine. All documents must be bilingual, submitted in Ukrainian or be accompanied by an official translation. End note.

Exporters are advised at the planning stage to check with their importer(s) to identify the types of controls that are applicable to the product using Appendices X and XIII as a reference. Then, it is necessary to make sure that all required inspection services are present at the intended entry point into Ukraine (Appendix XII). The exporter should choose another point of entry if all of the required inspection services are not performed at a given entry point.

Any food product (except those produced for personal consumption), food raw materials and agricultural products are prohibited entry into Ukraine without documented evidence of their quality and safety. Control over adherence to the procedure of food and agricultural product imports rests with the Customs Service of Ukraine. The product will not be granted final clearance until all legal procedures are met. The following documentation is required for customs clearance:

- certificate of conformity;
- 2. state sanitary and epidemiological expertise certificate, (or certificate on state registration of special food products);
- 3. veterinary certificate (see Sections VI and VII and Appendices X and XIII for applicability);
- 4. import permit and original phytosanitary certificate (see Sections VI and VII and Appendix X for applicability);

Labeling of food products and food raw materials must meet the requirements of Ukrainian legislation outlined in Section II.

It is highly advisable to complete mandatory state sanitary and epidemiological testing (#2 above) prior to shipping to Ukraine. The Ukrainian importer can submit samples for testing to the Institute of Ecohygiene and Toxicology under the Ministry of Health Care of Ukraine or another institution authorized by the Ministry to obtain a certificate of state sanitary and hygiene testing. All other certificates could be processed at the same time, so it is possible to complete the customs clearance process in 7 - 10 days including additional required laboratory tests.

APPENDIX I. UKRAINIAN GOVERNMENT REGULATORY AGENCY CONTACTS

APPENDIX VII. LIST OF FOOD ADDITIVES ALLOWED FOR USE IN FOOD PRODUCTS

Index	Food Additives	Index	Food Additives
E 100	Curcumins	E 300	Ascorbic acid
E 101	Riboflavin	E 301	Sodium ascorbate
E 140	Chlorophylls	E 306	Mixed tocopherols concentrate
E 141	Chlorophylls copper complexes	E 307	Alpha-tocopherol
E 150a	Caramel I-plain	E 308	Gamma-tocopherol
E 150b	Caramel II - Caustic sulfite	E 309	Delta-tocopherol
E 150c	Caramel III-ammonian process	E 316	Sodium Isoascorbate
E 150d	Caramel IV-ammonia-sulphite	E 320	Butylated hydroxyanisole (BHA)
E 152	Carbon black (hydro-carbon)	E 321	Butylated hydroxytoluene (BHT)
E 153	Vegetable carbon	E 322	Lecithins
E 160a	Carotenes:	E 325	Sodium lactate (solution)
	Beta carotene sinthetic	E 326	Potassium lactate (solution)
	Natural extracts	E 327	Calcium lactate
E 160b	Annato extracts	E 330	Citric acid
E 160c	Paprika oleoresins	E 331	Sodium citrates
E 162	Beet red	E 332	Potassium citrates
E 163	Anthocyanins	E 334	Tartaric acid, L (+)
	Grape skin extract	E 335	Sodium tartrates
	Blackcurrant extract	E 336	Potassium tartrates
E 164	Saffron	E 338	Orthophosphoric acid
E 170	Calcium carbonates (i)	E 339	Sodium phosphates
	Calcium dicarbonates (ii)	E 341	Calcium Phosphates
E 181	Tannins (food grade)	E 342	Ammonium phosphates
-	Metilviolet	E 351	Potassium malate
-	Rodamin	E 363	Succinic acid
-	Phuxin	E 400	Alginic acid
E 200	Sorbic acid	E 401	Sodium alginate
E 201	Sodium sorbate	E 402	Potassium alginate
E 210	Benzoic acid	E 403	Ammonium alginate
E 211	Sodium Benzoate	E 404	Calcium alginate
E 220	Sulphur dioxide	E 405	Propyleneglycolalginate
E 222	Sodium hydrogen sulphite	E 406	Agar
E 223	Sodium metabisulphite	E 407	Carrageenan and its Na, K, NH4 salts
E 224	Potassium metabisulfite	E 410	Locust carab bean gum
E 234	Nisin	E 411	Oat gum
E 235	Pimaricin (Natamycin)	? 412	Guar gum
-	Lactocid	E 413	Tragacanth gum
-	Hydrogenium peroxydum	E 414	Gum arabic
E 239	Urotropin Hexamethylenetetramin	E 415	Xantan gum
E 250	Sodium nitrite	E 416	Karaya gum
E 251	Sodium nitrate	E 417	Tara gum
E 252	Potassium nitrate	E 418	Gellan gum
E 260	Acetic acid	E 420	Sorbitol and Sorbitol syrup
E 263	Calcium acetate	E 421	Mannitol
E 270	Lactic acid (L, D ?? LD)	E 422	Glycerol
E 285	Sodium tetraborate	E 431	Polyoxyethylene (40) stearate
E 290	Carbon dioxide	E 432	Polyoxyethylene (20) Sorbitan monolaurate
E 296	(DL-) Malic acid	E 433	Polyoxyethylene (20) Sorbitan monooleate

E 440	Pectins	E 525	Potassium hydroxide
-	Gelatine	E 526	Calcium hydroxide
E 450	Diphosphates	E 527	Ammonium hydroxide
E 451	Triphosphates	-	Sodium oxide
	Pentasodium triphosphate (i)	E 530	Magnesium oxide
	Pentapotassium triphosphate (ii)	E 558	Bentonite
E 452	Polyphosphates	E 559	Aluminium silicate
E 460	Cellulose	E 570	Fatty acids
E 461	Methyl cellulose	E 575	Glucono-delta-lactone
-	Carbulose	E 631	Disodium 5'-inositate
E 466	Sodium carboxymethyl cellulose Salts of fatty acids (with base Al, Ca, Na,	E 636	Maltol
E 470	Mg, K and NH4)	E 637	Ethyl maltol

The matrix was prepared by FAS-Kiev staff based on the information obtained from the following sources: Resolution of the Cabinet of Ministers of Ukraine *On Order of*

Unified Fee Collection at Entry Points into Ukraine # 1569 dated October 24, 2002 and Order of the State Committee of Ukraine on Technical Regulations and Consumer Policy On Approving the List of Products Subject to Mandatory Certification in Ukraine #498 dated August 30, 2002

Customs inspection is mandatory for all products

Sanitary and Veterinary Inspections have been combined into one category for convenience, although, a separate veterinary inspection is conducted for the products that fall under the following headings of the Harmonized System: HS 01-05; 07; 10; 12; 14-16; 19; 21 and 23, See Appendix XIII for the complete list of products.

Radiological inspection must be conducted to verify compliance of all imported agricultural and food products with the maximum allowable levels of radionuclines in food in Ukraine.

A separate ecological inspection is conducted to verify compliance with the international agreements on trade in endangered species in case of animal or bird importation and certain types of meat derived from wild animals.

APPENDIX XI. MAXIMUM ALLOWABLE LEVELS OF CESIUM-137 (137Cs) AND STRONTIUM-90 (90Sr) IN FOOD PRODUCTS AND WATER, Bq/kg

	Name of the product	¹³⁷ Cs	90Sr
1	Bread and Bread Products (pasta, pastries, etc.)	20	5
	Potatoes	60	20
3	Vegetables	40	20
4	Fruits	70	10
5	Meat and Meat Products	200	20
6	Fish and Fish Products	150	35
